

## Transform your fleet operations with data

### Voyager FLEET INSIGHT (VFI)

Data-led solutions that enhance the way you manage navigation compliance and costs online.

**Track every fleet from one location.** Voyager tracks every vessel worldwide and makes that data available to you to help you manage your fleet all from one location. Historic tracking, nautical miles sailed and sea hours analysis enable costs to be more accurately predicted and help improve budgeting and maintenance scheduling.

**Make managing navigation compliance easier.** Giving you a detailed view of individual vessels' navigational activities and compliance requirements, ensuring that your vessels are compliant with Flag, Port State and SIRE requirements.

**Identify overspend & unlock cost savings.** The purchasing and usage of data in VFI shows that even the best run fleets significantly overspend on navigation. Identify the ENC and digital publication overspend in your fleet and reduce your cost of navigation.

**View your fleet live on a large screen in Wallboard mode.** Continuous display of live vessel positions on large screen in your office gives you full visibility of your fleet at all times.
